Frank H. Duffy, M.D., a Professor and Pediatric Neurologist at Harvard Medical School, authored an editorial in the January 2000 issue of the journal *Clinical Electroencephalography*. He stated that scholarly literature now suggests that neurofeedback “should play a major therapeutic role in many difficult areas. In my opinion, if any medication had demonstrated such a wide spectrum of efficacy it would be universally accepted and widely used’ (p. v). “It is a field to be taken seriously by all’ (p. vii).
